EGG DROP SYNDROME '76

ID Screen® EDS Indirect

Indirect ELISA for the detection of antibodies against the EDS'76 virus in chicken sera.

Note: The same convenient protocol (buffers, incubation times and temperatures) is used for most ID Screen® poultry kits.

- **High specificity and very low background**
- **Short incubation times:** results in 75 minutes (30-30-15 protocol)
- **Comprehensive data analysis** with the IDSoft™ program
- **Freeze-dried positive and negative reference sera** available as internal controls
- **The stop solution no longer contains H₂SO₄,** meaning that it is less corrosive

Specifications

Method	Indirect ELISA
Species	Chicken
Specimens	Serum
Coated antigen	EDS purified antigen
Conjugate	Anti-chicken-HRP conjugate (concentrated 10X)

Ordering information

Product code	EDS-5P	EDS-10P
Kit format	5 plates	10 plates
Reactions	480	960
Plate format	12 x 8-well strips	

Associated Products

EDS positive freeze-dried serum

Product Code	MRIPOS-BIRD
Format	0.5 ml vial (freeze-dried)
Description	Freeze-dried multi-positive chicken and turkey serum pool produced by GD Animal Health, the Netherlands. To be used as internal reference material for quality control.

SPF negative freeze-dried serum

Product Code	MRINEG-BIRD
Format	0.5 ml vial (freeze-dried)
Description	Freeze-dried SPF negative chicken serum to be used as internal reference material for quality control.
