INFECTIONIOUS BOVINE RHINOTRACHEITIS (IBR)

ID Screen® IBR gB Competition

Competitive ELISA for the detection of anti-gB antibodies in serum, plasma and milk samples.

- **Calibrated to detect the EU2 (weak-positive) standard serum¹**

- **Flexible test:** short and overnight protocols for serum and milk samples

- **Practical:** you can easily check that all samples have been correctly deposited because the dilution buffer changes colour upon addition of the sera

- **The stop solution no longer contains H₂SO₄, meaning that it is less corrosive**

Specifications

Method	Competitive ELISA
Species	Cattle and buffalo
Specimens	Serum, plasma and milk
Incubations	Short and overnight
Coated antigen	BHV-1 purified lysat
Conjugate	Ready-to-use anti-gB-HRP conjugate

Ordering information

Product code	IBRGBC-5P	IBRGBC-10P
Kit format	5 plates	10 plates
Reactions	480	960
Plate format	12 x 8-well strips
