INFECTIOUS BRONCHITIS

ID Screen® Infectious Bronchitis Indirect

Indirect ELISA for the detection of antibodies against the Infectious Bronchitis Virus (IBV) in chicken sera.

May be used to detect infection or to quantify IBV antibody levels in vaccinated birds.

Note: The same convenient protocol (buffers, incubation times and temperatures) is used for most ID Screen® poultry kits.

- **Detects all IBV variants**
- **High specificity and very low background**
- **Short incubation times:** results in 75 minutes (30-30-15 protocol)
- **Comprehensive data analysis** with the IDSoft™ program
- **Freeze-dried positive and negative reference sera** available as internal controls
- **The stop solution no longer contains H₂SO₄**, meaning that it is less corrosive

Specifications

Method	Indirect ELISA
Species	Chicken
Specimens	Serum
Coated antigen	IBV purified antigen
Conjugate	Anti-chicken-HRP conjugate (concentrated 10X)

Ordering information

Product code	IBVS-5P	IBVS-10P
Kit format	5 plates	10 plates
Reactions	480	960
Plate format	12 x 8-well strips	

Associated Products

IBV positive freeze-dried serum

Product Code	MRI-IBV
Format	0.25 ml vial (freeze-dried)
Description	Freeze-dried positive chicken serum to be used as internal reference material for quality control.

SPF negative freeze-dried serum

Product Code	MRINEG-BIRD
Format	0.5 ml vial (freeze-dried)
Description	Freeze-dried SPF negative chicken serum to be used as internal reference material for quality control.
