

Indirect ELISA for the detection of antibodies against the EDS'76 virus in chicken sera.

This kit is perfectly suited for disease diagnosis and monitoring of vaccination.

Note: The same convenient protocol (buffers, incubation times and temperatures) is used for most ID Screen® poultry kits.

- **Improved analytical sensitivity** with respect to other commercial ELISAs
- **Excellent correlation with the HI test**
- **Comprehensive data analysis** with the IDSoft™ program
- **Positive and negative reference sera** available as internal controls
- **Chloroform-free egg yolk protocol coming soon for use with layers!** Egg yolk collection is easy for the veterinarian, and does not generate stress for the animal.

SPECIFICATIONS

Method	Indirect ELISA
Species	Chickens (breeders and layers)
Specimens	Serum Egg yolk protocol under validation, consult us!
Coated antigen	EDS purified antigen
Conjugate	Anti-chicken-HRP conjugate (concentrated 10X)

ORDERING INFORMATION

Product code	EDS-5P	EDS-10P
Kit format	5 plates	10 plates
Reactions	480	960
Plate format	12 x 8-well strips	12 x 8-well strips

ASSOCIATED PRODUCTS

Ready-to-use multi-positive serum - ref. A

Product code	MRIPOS-BIRD-RTU-A
---------------------	-------------------

Format 5 ml vial

Description Ready-to-use multi-positive chicken serum, positive with the ID Screen[®] kits: IBDVP2, IBVS, ILTS, ILTGBS, EDS, MG/MS (combo kit), NDVS, NDVS-CV. (Negative for MM). To be used as internal reference material for quality control.

Ready-to-use chicken negative serum

Product code MRINEG-BIRD-RTU

Format 5 ml vial

Description Ready to use specific pathogen free (SPF) chicken serum pool. Does not contain any antibodies against any avian pathogen. For use with all the IDvet poultry ELISA kits or for RSA testing.
