

Competitive ELISA for the detection of antibodies against the EHDV VP7 protein in sheep, goat, cattle, buffalo or deer serum and plasma samples.

- **Detects all serotypes**, as the VP7 protein is highly conserved
- **Early detection of seroconversion** (7-15 days post-infection)
- **The best combination of high Se and Spe**
- **High exclusivity** with respect to BTV
- Results in only **90 minutes**
- **Easier-to-use** and better adapted to high throughput testing than the AGID test.
- **More convenient protocol** than other commercial ELISAs: no sample pre-dilution step required and room temperature incubations.

SPECIFICATIONS

Method	Competitive ELISA
Species	Domestic and wild ruminants
Specimens	Serum and plasma
Coated antigen	Recombinant VP7 protein
Conjugate	Anti-VP7-HRP (concentrated 10X)

ORDERING INFORMATION

Product code	EHDVC-5P
Kit format	5 plates
Reactions	480
Plate format	12 x 8-well strips

ASSOCIATED PRODUCTS

EHDV positive freeze-dried serum

Product code	MRI-EHDV
Format	1 ml vial (freeze-dried)
Description	Freeze-dried positive bovine serum to be used as internal
