

Double antigen ELISA kit for the detection of antibodies directed against the Equine Infectious Anemia Virus (EIAV) GAG and TM proteins in horse serum and plasma.

- **Highly sensitive and specific**
- **Fast and easy-to-use**, with results in 90 minutes
- **Robust** with haemolysed samples
- **Practical**: you can easily check that all samples have been correctly deposited because the dilution buffer changes color upon addition of the sera

SPECIFICATIONS

Method	Double antigen ELISA
Species	Equine
Specimens	Serum and plasma
Coated antigen	P26 recombinant antigen
Conjugate	P26 antigen-HRP conjugate (concentrated 10X)

ORDERING INFORMATION

Product code	EIAED-1P	EIAED-4P
Kit format	1 plate	4 plates
Reactions	96	384
Plate format	12 x 8-well strips	12 x 8-well strips
