

Indirect ELISA kit for the detection of anti-*Leishmania infantum* antibodies in canine serum and plasma.

- **Particularly rapid**, notably in comparison with indirect immunofluorescence
- **Improved specificity** thanks to the use of a *L. infantum* purified antigen
- **Easy-to-use**, with results in 90 minutes

SPECIFICATIONS

Method	Indirect ELISA
Species	Dogs
Specimens	Serum and plasma
Coated antigen	<i>L. infantum</i> purified antigen
Conjugate	Anti-canine IgG–HRP conjugate (concentrated 10X)

ORDERING INFORMATION

Product code	LEISHS-2P
Kit format	2 plates
Reactions	192
Plate format	12 x 8-well strips

ASSOCIATED PRODUCTS

Leishmania infantum positive freeze-dried serum

Product code	MRI-LEISH
Format	1 ml vial (freeze-dried)
Description	Freeze-dried, highly-positive serum from a naturally-infected dog. Produces a positive reaction when analysed by ELISA or by IFAT (Indirect Fluorescent Antibody Test) To be used as internal reference material for quality control.

***Leishmania infantum* negative freeze-dried serum**

Product code	MRINEG-LEISH
Format	1 ml vial (freeze-dried)
Description	Freeze-dried negative canine serum. Produces a negative reaction when analysed by ELISA or by IFAT (Indirect Fluorescent Antibody Test). To be used as internal reference material for quality control.
