

Indirect ELISA for the detection of antibodies against *Mycoplasma agalactiae* in individual ovine or caprine serum and plasma.

- **High specificity** (100%) thanks to the use of a *M. agalactiae* P48 recombinant antigen: does not cross-react with other circulating Mycoplasma strains
- Slightly higher sensitivity than other P48-based ELISAs
- Excellent reproducibility, robustness, repeatability and stability
- **For use as part of disease eradication programs at the herd level: detect sub-clinical infection and/or the presence of carrier animals**

SPECIFICATIONS

Method	Indirect ELISA
Species	Sheep and goats
Specimens	Serum and plasma
Coated antigen	Purified <i>Mycoplasma agalactiae</i> P48 recombinant antigen
Conjugate	Anti-ruminant-HRP conjugate (concentrated 10X)

ORDERING INFORMATION

Product code	MAGALS-2P	MAGALS-5P
Kit format	2 plates	5 plates
Reactions	192	480
Plate format	12 x 8-well strips	12 x 8-well strips
