

Competitive ELISA kit for the detection of anti-NDV nucleoprotein antibodies in domestic and wild avian species.

This test may be used to determine the immune status of individuals, flocks or populations.

Note: The same convenient protocol (buffers, incubation times and temperatures) is used for most ID Screen® poultry kits.

- **Used worldwide** in government monitoring programs
- **Multi-species test:** the only commercial ELISA applicable to both domestic and wild avian species
- Particularly suited to **monitoring disease in regions without vaccination**
- **High sensitivity and specificity:** • Earlier detection of seroconversion (7 dpi) compared with indirect ELISAs • High analytical sensitivity • Detection of all strains • No cross-reactions with Avian Paramyxoviruses 3 (APMV-3)
- **Short incubation times:** results in 75 minutes (30-30-15 protocol)
- **May be used with egg yolk samples** which are easier to collect and cause less stress to the layers
- **Comprehensive data analysis** with the IDSoft™ program
- **Positive and negative reference sera** available as internal controls

SPECIFICATIONS

Method	Competitive ELISA
Species	Avian (domestic and wild species)
Specimens	Serum or egg yolk
Coated antigen	NDV-purified antigen
Conjugate	Anti-NDV-HRP conjugate (concentrated 10X)

ORDERING INFORMATION

Product code	NDVC-2P	NDVC-5P	NDVC-10P
Kit format	2 plates	5 plates	10 plates
Reactions	192	480	960
Plate format	12 x 8-well strips	12 x 8-well strips	12 x 8-well strips

ASSOCIATED PRODUCTS

Ready-to-use chicken negative serum

Product code	MRINEG-BIRD-RTU
Format	5 ml vial
Description	Ready to use specific pathogen free (SPF) chicken serum pool. Does not contain any antibodies against any avian pathogen. For use with all the IDvet poultry ELISA kits or for RSA testing.
