

The only commercial indirect ELISA for the specific detection of antibodies against the NDV Nucleoprotein (NP) in chicken or turkey serum.

Note: The same convenient protocol (buffers, incubation times and temperatures) is used for most ID Screen® poultry kits.

- **Convenient for disease diagnosis** in chickens (broilers, breeders and layers) and turkeys
- **Perfectly suited for use as a DIVA* test:** may be used in combination with the [ID Screen® Newcastle Disease Indirect](#) ELISA to detect natural infection in animals vaccinated with rHVT-F vaccines alone
- **May be used with egg yolk samples** which are easier to collect and cause less stress to the layers
- **Short incubation times:** results in 75 minutes (30-30-15 protocol)

*DIVA: Differentiation between Infected and Vaccinated Animals

SPECIFICATIONS

Method	Indirect ELISA
Species	Chickens (broilers, breeders, layers) and turkeys
Specimens	Serum, plasma, egg yolk
Coated antigen	Recombinant nucleoprotein
Conjugate	Anti-chicken-HRP (concentrated 10X)

ORDERING INFORMATION

Product code	NDVNP-5P	NDVNP-10P
Kit format	5 plates	10 plates
Reactions	480	960
Plate format	12 x 8-well strips	12 x 8-well strips

ASSOCIATED PRODUCTS

Ready-to-use multi-positive serum – ref. B

Product code	MRIPOS-BIRD-RTU-B
Format	5 ml vial
Description	Ready-to-use multi-positive chicken serum, to be used with the ID

Screen® kits: AEVS, IBDS, ILTGIS, MPVS, MG, MS, NDVNP, PMS-CHICK, REOS, SALS, SALSGPD.

To be used as internal reference material for quality control.

Ready-to-use chicken negative serum

Product code MRINEG-BIRD-RTU

Format 5 ml vial

Description Ready to use specific pathogen free (SPF) chicken serum pool.
Does not contain any antibodies against any avian pathogen. For use with all the IDvet poultry ELISA kits or for RSA testing.
