

Indirect ELISA for the detection of antibodies directed against *Pasteurella multocida* in duck sera.

Note: The same convenient protocol (buffers, incubation times and temperatures) is used for most ID Screen® poultry kits.

- **Short incubation times:** results in 75 minutes (30-30-15 protocol)
- **Comprehensive data analysis** with the IDSoft™ program

SPECIFICATIONS

Method	Indirect ELISA
Species	Ducks
Specimens	Serum
Coated antigen	<i>Pasteurella multocida</i> extract antigen
Conjugate	Anti-duck-HRP (concentrated 10X)

ORDERING INFORMATION

Product code	PMS-DUCK-5P	PMS-DUCK-10P
Kit format	5 plates	10 plates
Reactions	480	960
Plate format	12 x 8-well strips	12 x 8-well strips

ASSOCIATED PRODUCTS

Ready-to-use chicken negative serum

Product code	MRINEG-BIRD-RTU
Format	5 ml vial
Description	Ready to use specific pathogen free (SPF) chicken serum pool. Does not contain any antibodies against any avian pathogen. For use with all the IDvet poultry ELISA kits or for RSA testing.
