

Indirect ELISA for the detection of antibodies against the Avian Encephalomyelitis virus (AEV) in chicken serum or plasma.

Note: The same convenient protocol (buffers, incubation times and temperatures) is used for most ID Screen® poultry kits.

- Complements the IDvet range of ELISAs for vaccination monitoring of breeders and layers
- Offers similar performance (sensitivity and specificity) to the most widely used commercial AE kits
- Available in different formats: 5 and 10 plates
- Comprehensive data analysis with the IDSoft™ program
- Positive reference serum available with expected titers in order to monitor results over time

SPECIFICATIONS

Method	Indirect ELISA
Species	Chickens (breeders and layers)
Specimens	Serum or plasma
Coated antigen	Purified AEV antigen
Conjugate	Anti-chicken-HRP (concentrated 10X)

ORDERING INFORMATION

Product code	AEVS-5P	AEVS-10P
Kit format	5 plates	10 plates
Reactions	480	960
Plate format	12 x 8-well strips	12 x 8-well strips

ASSOCIATED PRODUCTS

Ready-to-use multi-positive serum - ref. B

Product code	MRIPOS-BIRD-RTU-B
Format	5 ml vial
Description	Ready-to-use multi-positive chicken serum, to be used with the ID Screen® kits: AEVS, IBDS, ILTGIS, MPVS, MG, MS, NDVNP, PMS-

CHICK, REOS, SALS, SALSGPD.

To be used as internal reference material for quality control.

Ready-to-use chicken negative serum

Product code

MRINEG-BIRD-RTU

Format

5 ml vial

Description

Ready to use specific pathogen free (SPF) chicken serum pool.

Does not contain any antibodies against any avian pathogen. For use with all the IDvet poultry ELISA kits or for RSA testing.
