

Indirect ELISA for the detection of antibodies directed against Avian Reovirus in chicken serum.

Note: The same convenient protocol (buffers, incubation times and temperatures) is used for most ID Screen® poultry kits.

- **High specificity and very low background** (no risk of false positive results)
- **Short incubation times:** results in 75 minutes (30-30-15 protocol)
- **Comprehensive data analysis** with the IDSoft™ program
- **Positive and negative reference sera** available as internal controls
