

Indirect ELISA for the detection of antibodies against the Infectious Bronchitis Virus (IBV) in chicken sera.

Highly specific and with very low background, the IBVS kit detects all IBV variants, including QX and 793B strains. It may be used to detect infection or to quantify IBV antibody levels in vaccinated birds.

Note: the same convenient protocol (buffers, incubation times and temperatures) is used for most ID Screen® poultry kits.

- **Detects all IBV variants**
- **High specificity and very low background** (no risk of false positive results)
- **May be used with egg yolk samples** which are easier to collect and cause less stress to the layers
- **Short incubation times:** results in 75 minutes (30-30-15 protocol)
- **Comprehensive data analysis** with the IDSoft™ program
- **Positive and negative reference sera** available as internal controls

SPECIFICATIONS

Method	Indirect ELISA
Species	Chickens (broilers, breeders and layers)
Specimens	Serum or egg yolk
Coated antigen	IBV purified antigen
Conjugate	Anti-chicken-HRP conjugate (concentrated 10X)

ORDERING INFORMATION

Product code	IBVS-5P	IBVS-10P
Kit format	5 plates	10 plates
Reactions	480	960
Plate format	12 x 8-well strips	12 x 8-well strips

ASSOCIATED PRODUCTS

Ready-to-use multi-positive serum - ref. A

Product code	MRIPOS-BIRD-RTU-A
---------------------	-------------------

Format 5 ml vial

Description Ready-to-use multi-positive chicken serum, positive with the ID Screen[®] kits: IBDVP2, IBVS, ILTS, ILTGBS, EDS, MG/MS (combo kit), NDVS, NDVS-CV. (Negative for MM). To be used as internal reference material for quality control.

Ready-to-use chicken negative serum

Product code MRINEG-BIRD-RTU

Format 5 ml vial

Description Ready to use specific pathogen free (SPF) chicken serum pool. Does not contain any antibodies against any avian pathogen. For use with all the IDvet poultry ELISA kits or for RSA testing.
