

## ID Gene™ Influenza H9 Lineage G1-like Duplex (cat: IDFLUH9G1) is a RT-qPCR kit that amplifies a target sequence in the G1-like lineages of the H9 subtype of the Influenza A virus genome.

This kit is a qualitative Duplex test. It simultaneously amplifies target RNA as well as an endogenous non-target positive control.

This kit may be used to test swabs (tracheal, oropharyngeal and cloaca ) and organs (trachea, lung, cecal tonsil) from birds or nucleic acid storage cards. Either individual samples or pools of up to 5 may be tested.

- Detects a target sequence in the **G1-like lineages of the H9 subtype of the Influenza A virus genome.**
- The only kit validated on **nucleic acid storage cards**. May also be used to test **swabs** (tracheal, oropharyngeal and cloacal) and **organs** (trachea, lung, cecal tonsil) from birds
- Includes **ready-to-use reagents, positive controls** to evaluate the efficiency of the extraction and amplification steps, as well as an **endogenous internal control**
- **Standardized protocol shared by all IDvet qPCR tests**
- Test **pools of up to 5 samples**, thanks to high kit sensitivity
- Offers the **fastest protocol on the market** (in association with the MAGFAST extraction system)
- Suitable for use with **most extraction systems** and **all thermocyclers**

### SPECIFICATIONS

<b>Product code</b>	IDFLUH9G1-50	IDFLUH9G1-100
<b>Reactions</b>	50	100
<b>Method</b>	RT-qPCR - Duplex - Qualitative	
<b>Species</b>	Avian	
<b>Sample types</b>	Swabs, organs, nucleic acid storage cards	

### ASSOCIATED PRODUCTS

#### FLUH9 Positive extraction control

<b>Product code</b>	PEC-FLUH9
<b>Format</b>	550 µL (freeze-dried)
<b>Description</b>	Freeze dried preparation of an inactivated strain of the Influenza A virus H9 subtype, diluted into tracheal and oropharyngeal swabs supernatants from negative birds.

To be prepared and extracted in the same way as samples, to validate the efficiency of the nucleic acid extraction and the RT-qPCR amplification processes and to monitor variations in analytical sensitivity.

### ID Gene® Spin Universal Extraction Kit

**Product code** SPIN50 / SPIN250

**Format** 50 preps / 250 preps

**Description** **Extraction system using silica columns for all matrices and all veterinary pathogens**

### ID Gene™ Mag Fast Extraction Kit

**Product code** MAGFAST384

**Format** 384 preps

**Description** **Rapid magnetic bead nucleic acid extraction kit for use with any matrix or pathogen (DNA or RNA).**

⇒ The **fastest magnetic bead** extraction kit on the market, with results in only 20 min!

⇒ Use in combination with the [ID Gene™ range of amplification kits](#) to obtain results in only **70 minutes for DNA** and **90 minutes for RNA** (extraction and amplification)

⇒ Compatible with most open extraction robots for magnetic beads
